

AMENDMENTS TO THE SPECIFICATION

On page 1, replace the subtitle after the first paragraph with the following rewritten version:

"Brief Description of Related Prior Art".

Insert the following new paragraph at the top of page 2:

"For example, patent application US 2002/044063 describes a fastening member comprising a threaded part and a head by means of which the threaded part can be turned in order to tighten the fastening member in a corresponding element. The head is formed of a plate in one piece with the threaded part and a cap covering the plate. The cap comprises a recessed portion in which an offset is provided to form a housing. The cap further comprises a remotely interrogatable electronic component which comprises a data storage means."

Replace the last paragraph on page 2 with the following rewritten version:

"These objectives are achieved by a fastening member comprising a threaded part and a head by means of which the threaded part can be turned in order to tighten the fastening member in a corresponding element, ~~characterized in that~~ said head is being formed of a plate in one piece with the threaded part and a cap covering said plate, the cap comprising a recessed portion including an offset provided to form a housing, and the cap further comprising a remotely interrogatable electronic component which comprises a data storage means. An important aspect is that the plate comprising comprises a guide finger extending vertically from the side opposite the threaded part, the finger being arranged inside the housing to form a stop against which the cap presses in order to rotate the plate in the tightening direction, ~~and the cap further comprising a remotely interrogatable electronic component which comprises a data storage means,~~ said component being is held in the recessed portion as a protrusion in the housing so as to come to a stop against the guide finger when an attempt is made to untighten the fastening member."
